

Business Problem

Target Brazil E-Commerce Analytics

Business Context

Target is a globally renowned brand and a prominent retailer in the United States. Target makes itself a preferred shopping destination by offering outstanding value, inspiration, innovation and an exceptional guest experience that no other retailer can deliver.

This project focuses on Target's e-commerce operations in Brazil and analyzes over 100,000 customer orders placed between 2016 and 2018. The dataset provides a comprehensive view of customer purchases, order status, price, payment and freight performance, customer location, product attributes, and customer reviews, product information, payments, logistics, sellers, reviews, and geographic locations.

By analyzing this data, Target can better understand customer behavior, regional demand patterns, payment preferences, sales performance, and logistics efficiency, order processing, pricing strategies, payment and shipping efficiency, customer demographics, product characteristics, and customer satisfaction levels across Brazil.

Dataset Overview

The analysis is based on eight relational datasets:

- Customers
- Orders
- Order Items
- Products
- Payments
- Reviews
- Sellers
- Geolocation

Together, these datasets provide end-to-end visibility into the customer purchasing journey, from order placement to final delivery.

Database Schema

Business Objectives

As a Data Analyst at Target Brazil, the objective is to analyze the e-commerce dataset and generate actionable business insights that can support data-driven decision-making.

The analysis focuses on the following areas:

1. Customer Analysis

- Understand customer distribution across Brazil.
- Identify regional demand patterns.
- Evaluate market penetration across cities and states.

2. Sales Performance Analysis

- Analyze order growth trends over time.
- Identify seasonal purchasing patterns.
- Determine peak purchasing periods.

3. Revenue & Economic Analysis

- Evaluate order values across different regions.
- Analyze sales performance trends.
- Identify opportunities for business expansion.

4. Logistics & Delivery Analysis

- Measure delivery performance across states.
- Compare actual versus estimated delivery timelines.
- Analyze freight costs and shipping efficiency.

5. Payment Analysis

- Identify the most commonly used payment methods.
- Analyze installment-based purchasing behavior.
- Understand customer payment preferences.

6. Business Recommendations

- Generate actionable recommendations to improve customer experience.
- Identify opportunities to optimize logistics operations.
- Support growth and expansion strategies through data-driven insights.

Expected Outcome

The project aims to uncover meaningful insights related to:

- Customer behavior
- Regional demand patterns
- Sales performance
- Logistics efficiency
- Payment trends
- Business growth opportunities

The findings and recommendations will help Target improve operational efficiency, enhance customer satisfaction, and support strategic decision-making.
